## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 4-7, 11-12 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

Meyer et al (5,219,594) teach an apparatus for molding plastic material, comprising a plurality of mold cavities (35A-D), each having a plurality of side wall segments (8A-D) radially movable in a horizontal direction, wherein each of the segment is coupled to a linear drive member (not shown, col. 3, lines 14-18) via a coupling member, or lifter (9, 15, 16), which converting the vertical movement of the drive member into radially moving of the wall segments in the horizontal direction (Fig. 3, 8A-D), wherein less space is needed to move the mold segments for moving the molded product, the apparatus requires less space, and the mold cavities can be arranged in a smaller press (col. 1, lines 50-68).

However, Meyer et al fail to teach or suggest that the coupling comprises prismatic pins, each extending at the same angle relative to the direction of movement of the drive element, and each mold segment comprises a channel into which the pins fit and each channel having an axis corresponding to the axis of the corresponding pins.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
